TRANSMITTAL OF INFORMATION DISCLOSURE STATEMENT

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Dear Sir:

Transmitted herewith is an Information Disclosure Statement disclosing information which has come to the attention of applicants and/or their attorneys and is being submitted so as to comply with the duty of disclosure set forth in 37 C.F.R. § 1.56. In accordance with 37 C.F.R. § 1.97(b), the enclosed Statement is being filed within three (3) months of the filing date of the above-identified application or before the mailing date of a first Action on the merits.

Neither applicants nor their attorneys make any representation that any information disclosed herein may be "prior art" within the meaning of that term under 35 U.S.C. § 102 or § 103. Moreover, pursuant to 37 C.F.R. § 1.97, the filing of this Information Disclosure Statement shall not be construed as a representation that a search has been made or as an admission that the

information cited herein is, or is considered to be, material to patentability as defined in 37 C.F.R. § 1.56(b).

In accordance with 37 C.F.R. § 1.98, transmitted herewith are:

1. A completed copy of Form PTO/SB/08A "Information Disclosure Statement by Applicant" listing the patents, publications and other information being submitted for consideration; and
2. A legible copy of each patent, publication and other item of information in written form listed on the enclosed Form PTO/SB/08A, except for copies of U.S. patents and published U.S. patent applications which are not required for applications filed after June 30, 2003.

As this application was filed after June 30, 2003, copies of the U.S. patents and published U.S. patent applications listed on the enclosed Form PTO/SB/08A are not required and, therefore, not included herewith.

NON-ENGLISH INFORMATION

Pursuant to 37 C.F.R. § 1.98, following is a concise explanation of the relevance (as it is presently understood by the individual designated in 37 C.F.R. § 1.56(c) most knowledgeable about the content of the information), of each listed patent, publication or other information that is not in the English language:

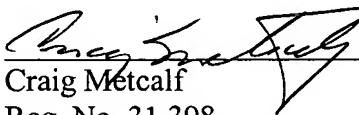

1. PCT Patent Application No. WO 02/14117 published February 21, 2002 discloses: The invention relates to an occupant protection device for a vehicle with an inner part which consists of a dimensionally stable support part and a cover, said cover consisting preferably of a foamed intermediate layer and a decorative layer and being connected to said support part over a large area; and which is configured as an instrument panel. The occupant protection device has an airbag which can be inflated by means of a gas generator, whereupon the airbag penetrates a section of the inner part that thus opens, entering the vehicle interior. According to the invention, the airbag is located between the support part and the cover in the form of a folded bundle.

2. European Patent Application No. EP 1 106 446 published June 13, 2001 discloses: The airbag cover which opens outwards under pressure of the opening airbag is flexible and designed to yield to the pressure of the inflating airbag. The airbag is mounted underneath the cover in a socket area connected to the support. The cover has tear lines to form a defined rip-open area. The airbag lifts up the cover to form an outward curvature and draws it along the tear lines.

3. Japanese Patent Application No. JP 2001-10435 published January 16, 2001 discloses: This airbag device includes an inflator formed with a mounting part, a retainer for retaining the inflator, and a bag disposed to cover the inflator on the retainer. The mounting part of the inflator, the retainer, and the bag are provided with respective holes aligned with one another, and a shaft member is inserted into the holes and locked by a locking member to integrate the inflator, the retainer and the bag with one another. The shaft member includes a head, a shank extending from the head, and a locking part provided at the shank, and the locking member fits into the shaft member. The mounting part of the inflator, the retainer and the bag are sandwiched between the head of the shaft member and the locking member.

4. German Patent Application No. DE 195 38 594 published April 24, 1997 discloses: The airbag unit has stay bolts through a carrier plate for the gas generator, and an airbag folded round the gas generator. The stay bolts have external fluting, the receiving apertures in the carrier plate are of a smaller diameter than that of the bolts. The edge region of the receiving apertures has slits round its circumference. The projections between the slits fit in the fluting with some elasticity. The airbag has its edge zone between the carrier plate and the base generator base.

Respectfully submitted,

Craig Metcalf
